Unit 4 Project 1
Project Requirements

Minimum requirements

Any items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The project uses Spring Boot to create a RESTful API and Cucumber for BDD testing.	
The project uses a PostgreSQL database.	
The project includes at least 3 CRUD operations.	
At least one model must have a relationship with the User model.	
Each model has a corresponding Cucumber feature file that tests the CRUD operations.	
The app is deployed online so that the rest of the world can use it.	
You are shown as the only contributor to the project on GitHub.	

Convention requirements

More than two items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The files in the app are organized following the conventions demonstrated in lectures.	
The code in the app adheres to coding conventions covered in lessons, like using plural names for arrays.	
The app does not contain dead code, commented-out sections, or prints to the console.	
The app can be used without encountering errors.	
The app is coded using proper indentation.	
The GitHub repository used for the project must be named appropriately. For example, names that describe your project are appropriate, whereas generic names such as **qa-project** or **unit**	

UI/UX requirements

More than two items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The app exhibits a visual theme, like a consistent color palette and cohesive layout across pages.	
The app is easily navigable by a first-time user. For example, navigation should be done through links instead of having to type in a URL to navigate around the app.	
Colors used in the app have appropriate contrast that meets the WCAG 2.0 level AA standard.	
All images on the site have alt text.	
No text is placed on top of an image in a way that makes the text inaccessible.	

README requirements

More than two items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The app's name.	
A brief description of your app and its functionality.	
A Getting started section. This section should include instructions on how to use your app.	
A Technologies used section. This section should list the principal technologies used by your application, including any major frameworks or libraries.	
If necessary, an Attributions section. This section should include links to any external resources (such as libraries or assets) you used to develop your application that require attribution. You can	

Summary			
The project meets the requirements above and passes.
